Section: Security Assessment and Testing

NEW QUESTION: 3

RBAC in Azure Kubernetes Service (AKS) wird verwendet, um die Berechtigungen für die Helm-Instanz zu konfigurieren. Welche der folgenden Konfigurationen ist die richtige?

ServiceAccount "tiller" wird erstellt.
ClusterRoleBinding "tiller" wird erstellt.
Helm wird mit dem ServiceAccount "tiller" initialisiert.
Helm wird mit dem ClusterRoleBinding "tiller" installiert.

Answer:

Explanation:

Explanation:

Step 1: Kubectl create

You can add a service account to Tiller using the `--service-account <NAME>` flag while you're configuring Helm (step 2 below). As a prerequisite, you'll have to create a role binding which specifies a role and a service account name that have been set up in advance.

Example: Service account with cluster-admin role

```
$ kubectl create -f rbac-config.yaml
serviceaccount "tiller" created
clusterrolebinding "tiller" created
$ helm init --service-account tiller
```

Step 2: helm init

To deploy a basic Tiller into an AKS cluster, use the `helm init` command.

Step 3: helm install

To install charts with Helm, use the `helm install` command and specify the name of the chart to install.
