Intrinsic Function Reference
AWS Cloud Formation provides several built-in functions that
help you manage your stacks. Use intrinsic functions in your
templates to assign values to properties that are not available
until runtime.
Note
You can use intrinsic functions only in specific parts of a
template. Currently, you can use intrinsic functions in
resource properties, outputs, metadata attributes, and update
policy attributes. You can also use intrinsic functions to
conditionally create stack resources.
For more information on intrinsic function please refer to the
