NEW QUESTION: 1
What is required by iLO to support agentless management? (Select two)
A. Write Community
B. System Location
C. SNMP Alert Destination
D. Trap Community
E. Read Community
Answer: C,E

NEW QUESTION: 2

A. fd00:ab32:14:ad88:ac:58:abc2:4

B. `fe80:ab32:145c::32cc:401b`
C. `ff00:3fff:65df:145c:dca8::82a4`
D. `2001:ab32:145c::32cc:401b`
Answer: A
Explanation:
Unique local addresses
Unique local addresses are IPv6 addresses that are private to an organization in the same
way that private addresses-such as 10.x.x.x, 192.168.x.x, or 172.16.0.0 -
172.31.255.255-can be used on an IPv4 network.
Unique local addresses, therefore, are not routable on the IPv6 Internet in the same way
that an address like 10.20.100.55 is not routable on the IPv4 Internet.
A unique local address is always structured as follows:
The first 8 bits are always 11111101 in binary format. This means that a unique local
address always begins with FD and has a prefix identifier of FD00::/8.
