- C.** Assign ownership to each remediation activity
- D.** Copy senior management on communications related to the audit

Answer: C

NEW QUESTION: 2

On a network using RIPng, the prefix field of a routing table entry has a value of 0:0:0:0:0:0:0:0.

What does this value signify?

- A. The associated route follows a default route out of the network.
- B. The next hop address is unknown.
- C. The neighboring router has IPv6 ND disabled.
- D. The next hop address is a site-local address.
- E. The next hop address must be the originator of the route advertisement.

Answer: A

NEW QUESTION: 3

Which statement is correct about the validate option when upgrading JUNOS software?

- A. It will check the MD5 checksum of the install package.
- B. It will check the compatibility of the configuration with the install package.
- C. It will check if the device meets the storage requirement for the install package.
- D. It will check if the device meets the memory requirements for the install package.

Answer: B

Explanation:

Explanation/Reference:

When you upgrade or downgrade Junos OS, we recommend that you include the validate option with the request system software add command to check that the candidate software is compatible with the current configuration. By default, when you add a package with a different release number, the validation check is done automatically.
