## NEW QUESTION: 2

When a data frame is sent and confirmed, what is the time interval to wait before the next data frame is sent?

A. PIFS

B. SIFS

C. DIFS

D. IFS

**Answer: C**

## NEW QUESTION: 3

Case Study 2

Requirements

ContentAnalysisService

The company's data science group built ContentAnalysisService which accepts user generated content as a string and returns a probable value for inappropriate content. Any values over a specific threshold must be reviewed by an employee of Contoso, Ltd.

You must create an Azure Function named CheckUserContent to perform the content checks.

Costs

You must minimize costs for all Azure services.

Manual review

To review content, the user must authenticate to the website portion of the ContentAnalysisService using their Azure AD

credentials. The website is built using React and all pages and API endpoints require authentication. In order to review content a user must be part of a ContentReviewer role. All completed reviews must include the reviewer's email address for auditing purposes.

#### High availability

All services must run in multiple regions. The failure of any service in a region must not impact overall application availability.

#### Monitoring

An alert must be raised if the ContentUploadService uses more than 80 percent of available CPU-cores.

#### Security

You have the following security requirements:

- \* Any web service accessible over the Internet must be protected from cross site scripting attacks.
- \* All websites and services must use SSL from a valid root certificate authority.
- \* Azure Storage access keys must only be stored in memory and must be available only to the service.
- \* All Internal services must only be accessible from Internal Virtual Networks (VNETs)
- \* All parts of the system must support inbound and outbound traffic restrictions.
- \* All service calls must be authenticated by using Azure AD.

#### User agreements

When a user submits content, they must agree to a user agreement. The agreement allows employees of Contoso.Ltd to review content, store cookies on user devices and track user's IP addresses.

Information regarding agreements is used by multiple divisions within Contoso, Ltd.

User responses must not be lost and must be available to all parties regardless of individual service uptime. The volume of agreements is expected to be in the millions per hour.

#### Validation testing

When a new version of the ContentAnalysisService is available the previous seven days of content must be processed with the new version to verify that the new version does not significantly deviate from the old version.

#### Issues

Users of the ContentUploadService report that they occasionally see HTTP 502 responses on specific pages.

#### Code

##### ContentUploadService

You need to configure the ContentUploadService deployment. Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

**A.** Add the following markup to line CS23:

```
types: Private
```

**B.** Add the following markup to line CS24:

osType: Windows

**C.** Add the following markup to line CS23:

types: Public

**D.** Add the following markup to line CS24:

osType: Linux

**Answer: A,C**

Explanation:

Scenario: All Internal services must only be accessible from Internal Virtual Networks (VNets) There are three Network Location types - Private, Public and Domain Reference:

<https://devblogs.microsoft.com/powershell/setting-network-location-to-private/>
