A. No,because eachinterface instance is unique and different from others.
B. No, filters can never be added automatically.
C. Yes, if they were reverse-engineered-
D. Yes,if they exist in the datastore definition.
Answer: A

NEW QUESTION: 2
What is the structure of a JSON web token?
A. three parts separated by dots: version header and signature
B. three parts separated by dots: header payload, and signature
C. header and payload
D. payload and signature
Answer: B
Explanation:
JSON Web Token (JWT) is an open standard (RFC 7519) that defines a compact and self-contained
way for securely transmitting information between parties as a JSON object. This information can
be verified and trusted because it is digitally signed. JWTs can be signed using a secret (with the
HMAC algorithm) or a public/private key pair using RSA or ECDSA.
JSON Web Tokens are composed of three parts, separated by a dot (.): Header, Payload,
Signature. Therefore, a JWT typically looks like the following:
xxxxx.yyyyy.zzzzz
The header typically consists of two parts: the type of the token, which is JWT, and the signing
algorithm being used, such as HMAC SHA256 or RSA.
The second part of the token is the payload, which contains the claims. Claims are statements
about an entity (typically, the user) and additional data.
To create the signature part you have to take the encoded header, the encoded payload, a secret,
the algorithm specified in the header, and sign that.

NEW QUESTION: 3
Which options are available to an XtremIO administrator when a snapshot is created?
A. Select a parent folder and choose full copy or pointer-based copy
B. Name the snapshot and select the parent folder
C. Verify the snapshot name and configure the maximum snapshot size
D. Create a new folder and allocate space to the new folder
Answer: B
