NEW QUESTION: 2

The security manager wants to unify the storage of credential, phone numbers, office numbers, and address information into one system. Which of the following is a system that will support the requirement on its own?

- A. RADIUS
- B. LDAP
- C. SAML
- D. TACACS

Answer: B

Explanation:

Explanation/Reference:

Explanation:

A 'directory' contains information about users.

The Lightweight Directory Access Protocol (LDAP) is a directory service protocol that runs on a layer above the TCP/IP stack. It provides a mechanism used to connect to, search, and modify Internet directories.

The Lightweight Directory Access Protocol (LDAP) is an open, vendor-neutral, industry standard application protocol for accessing and maintaining distributed directory information services over an Internet Protocol (IP) network. Directory services play an important role in developing intranet and Internet applications by allowing the sharing of information about users, systems, networks, services, and applications throughout the network. As examples, directory services may provide any organized set of records, often with a hierarchical structure, such as a corporate email directory. Similarly, a telephone directory is a list of subscribers with an address and a phone number.

NEW QUESTION: 3

You manage 1,000 computers that run Windows 10. All the computers are enrolled in Microsoft Intune.

You manage the servicing channel settings of the computers by using Intune.

You need to review the servicing status of a computer.

What should you do?

- A. From Software updates, view the audit logs.
- B. From Software updates, view the Per update ring deployment state.
- C. From Device compliance, view the device compliance.
- D. From Device configuration- Profiles, view the device status.

Answer: B

Testlet 1

This is a case study. Case studies are not timed separately.

You can use as much exam time as you would

like to complete each case. However, there may be additional case studies and sections on this exam. You

must manage your time to ensure that you are able to complete all questions included on this exam in the

time provided.

To answer the questions included in a case study, you will need to reference information that is provided in

the case study. Case studies might contain exhibits and other resources that provide more information

about the scenario that is described in the case study. Each question is independent of the other questions

in this case study.

At the end of this case study, a review screen will appear.

This screen allows you to review your answers

and to make changes before you move to the next section of the exam. After you begin a new section, you

cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to

explore the content of the case study before you answer the questions. Clicking these buttons displays

information such as business requirements, existing environment, and problem statements. When you are

ready to answer a question, click the Question button to return to the question.

Existing Environment

Current Business Model

The Los Angeles office has 500 developers. The developers work flexible hours ranging from 11:00 to

22:00. Litware has a Microsoft System Center 2012 R2

Configuration Manager deployment. During

discovery, the company discovers a process where users are emailing bank account information of its customers to internal and external recipients.

Current Environment

The network contains an Active Directory domain that is synced to Microsoft Azure Active Directory (Azure AD). The functional level of the forest and the domain is Windows Server 2012 R2. All domain controllers run Windows Server 2012 R2.

Litware has the computers shown in the following table.

The development department uses projects in Azure DevOps to build applications.

Most of the employees in the sales department are contractors. Each contractor is assigned a computer that runs Windows 10. At the end of each contract, the computer is assigned to different contractor.

Currently, the computers are re-provisioned manually by the IT department.

Problem Statements

Litware identifies the following issues on the network: Employees in the Los Angeles office report slow Internet performance when updates are downloading.

The employees also report that the updates frequently consume considerable resources when they are installed. The Update settings are configured as shown in the Updates exhibit. (Click the Updates button.)

Management suspects that the source code for the proprietary applications in Azure DevOps is being

shared externally.

Re-provisioning the sales department computers is too time consuming.

Requirements

Business Goals

Litware plans to transition to co-management for all the company-owned Windows 10 computers.

Whenever possible, Litware wants to minimize hardware and software costs.

Device Management Requirements

Litware identifies the following device management requirements:

Prevent the sales department employees from forwarding email that contains bank account information.

Ensure that Microsoft Edge Favorites are accessible from all computers to which the developers sign

in.

Prevent employees in the research department from copying

patented information from trusted

applications to untrusted applications.

Technical Requirements

Litware identifies the following technical requirements for the planned deployment:

Re-provision the sales department computers by using Windows AutoPilot.

Ensure that the projects in Azure DevOps can be accessed from the corporate network only.

Ensure that users can sign in to the Azure AD-joined computers by using a PIN. The PIN must expire

every 30 days.

Ensure that the company name and logo appears during the Out of Box Experience (OOBE) when

using Windows AutoPilot.

Exhibits

NEW QUESTION: 4

Which three statements are true regarding drop ship orders? (Choose three)

A. The supplier ships to the seller

B. Requisition import program creates the requisition.

C. Drop shipments are created as sales orders in order management with an initial source type.

D. The purchase release concurrent program or workflow in order management creates rows in the requisition import tables.

E. The PO is created from an approved requisition, which is then sent to the supplier

Answer: B,D,E
